check compiler and compile with extensions and optimization flag

check performance

They are about the same.

MARKOV Desktop (Xfce or Mate)

This app will launch an interactive desktop on one or more compute nodes. You will have full access to the resources these nodes provide. This is analogous to an interactive batch job.

GPU Comparison Report: NVIDIA GeForce RTX 2080 Ti

Summary of results

The table and chart below show the peak performance of various GPUs using the same version of MATLAB. Your results (if any) are highlighted in bold in the table and on the chart. All other results are from pre-stored data. The peak performance shown is usually achieved when dealing with extremely large arrays. Typical performance in day-to-day use will usually be much lower.

Results captured using the CPUs on the host PC (i.e., without using a GPU) are included for comparison.

Results are shown for calculations in both single and double precision. For all results, higher is better.
